

# **ZeoRoad Winter Zeolite SK**

- 
- fully ecological spreading material with the effect of thawing, anti-icing and roughening for winter maintenance of roads, parking lots, sidewalks, hiking trails and other areas where there is a risk of skidding or slipping, while absorbing water, reducing the risk of re-ice formation
  - with its high quality it fully replaces the use of sanding salt, silica sand or aggregate and has a long term effect
  - is 100% environmentally friendly - does not damage roads, sidewalks, paving or vegetation around the grit is harmless to animals
  - absorbs not only water, but also oil and oil stains or other pollution of the road surface

- 
- at the end of winter maintenance it is not necessary to clean and dispose of it just sweep it into the lawn next to the roads, where it acts as a soil conditioner
  - is suitable for large-volume spreading wagons as well as for domestic use or for creating various spreading mixtures
  - ZeoRoad Winter is effective at least up to a temperature of - 20°C

Zeolite SK - mining takes place in a quarry which is located near the village of Pusté Čemerné in eastern Slovakia is one of the world's best in terms of quality and purity.
